

CONOX[™]

The Earth's Atmosphere, while supporting all life and affecting all weather, is as thin as the skin of an apple.

Humanity previously took the Earth's Atmosphere for granted. Humanity has since learned.

The United Nations, the U.S. Supreme Court and the Nobel Prize Committee, among others, recognize that Global Warming must be halted in order to protect humanity from severe climatic events.

Robert Burness of the USGS says we need to reduce emissions by 70% to protect our planet from dramatic climatic changes.

NASA's Climate Scientist, James Hanson, has reported and informed Congress of Global Warming. Before Congress in June of 2008 Dr. Hanson stated, "We are at a point of planetary emergency...There are tipping points in the climate system which we are very close to, and if we pass them, the dynamics of the system take over and carry you to very large changes which are out of your control."

**For our children,
we must do better.**

CONOX[™]

**Naturally Reducing
Carbon, Nitrogen and Sulfur
Emissions**

CONOX[™] MISSION

Manage CO_x, NO_x and SO_x emissions from point sources with innovative and profitable solutions which produce needed products via processes which work in harmony with nature.

ClearValue is a leader in water chemical, biological and thermodynamic technologies. ClearValue has developed patented and commercialized leading technologies in water purification, bio-solids management, noxious odor control, hydrogen and biological fuel related systems.

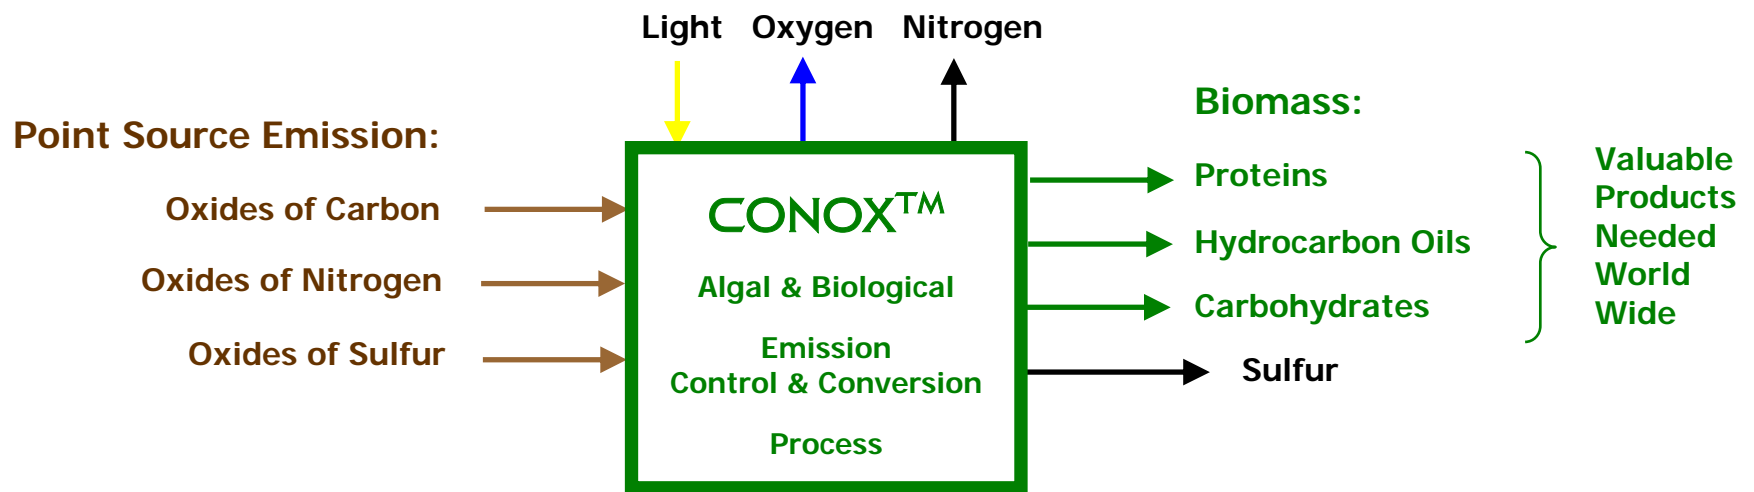

ClearValue has developed over 40 patents in the above technologies while having 11 patents issued.

The ClearValue Team envisions pure water, hydrogen and clean energy technologies as most important to Humanity within just a few years.

It is ClearValue's Mission is to develop and commercialize innovative technologies in water purification, bio-solids management and energy.

It is ClearValue's Objective is to meet the new age needs of Humanity while obtaining significant earnings and thereby providing a significant return to investors.

CONOX™ Process

CONOX™ is a unique and patented design which converts point source emissions or other CO_x streams into products which are friendly to the environment, recyclable or salable.

CONOX™:

- Operates 24/7,
- Only produces biomass, oxygen, nitrogen and separated mercury as products,
- Handles products with available equipment,
- Is low on maintenance,
- Produces no toxic emissions, and
- Can be installed on new facilities or retrofitted to existing facilities.
- Comprises algal and biological systems which naturally convert point source emissions into valuable products.
- Comprises special design features which incorporate light into the biomass.
- Comprises special design features which minimize algal/biological reactor footprint. (A 2000MW Power Plant could fit its required CONOX™ Process within a city block.)
- Comprises algal and biological handling equipment.
- May generate power.
- Is a natural process.

CONOX™:

- Naturally produces crude oil.
- Naturally produces proteins.
- Naturally produces carbohydrates.
- Avoids abnormal handling of CO₂ in underground storage.
- Has a small process footprint.
- Is 90 to 95 % efficient; and with recycle, is 100% efficient.
- Is scalable from 1 to 200 Million cubic feet per day of point source emissions.
- Produces its own photons at night.
- Is naturally capable of hydrogen production.
- Is positive cash flow.

Pure water and clean air are a clear value.

ClearValue means pure water and clean air.
